

LE VEIL ELECTRONIC HUMIDIFICATION SYSTEM

Description

With the Le Veil electronic humidification system, you are always guaranteed fresh and perfectly stored cigars. The new version with acrylic polymer crystals, transparent tank and black lid is microprocessor-controlled and has a particularly quiet operating noise. The humidifier runs on a mains connection, but also comes with a so-called flat cable which makes it possible for you to use the humidifier in any table humidor. The flat cable is then usually fed through the slot between the humidor body and the humidor lid. A large digital LCD display and the improved air circulation through the built-in fan in the lid, the Le Veil humidifies up to 600 cigars without any problems. Two water tanks are included in the scope of delivery, in which acrylic polymer crystals are located. This means you have the right tank for almost every humidor size. In addition, an external fan is optionally available for large humidors, which makes it possible to optimally distribute the humidity in humidor cabinets to all levels.

Name

Le Veil electronic Humidification System

Colour

Black / transparent

Capacity

Humidifies up to 600 cigars

Our Tip
